

Concept Attainment for Young Children: A Research-Based Strategy

The teacher makes a transparency of picture like the following example below. The Yes column has something in common (Mammals). As you begin, only uncover the pictures pairs one at a time - A yes picture and a no picture. The students are trying to identify what all the yeses have in common. After a few minutes, students are allowed to ask if a certain item, in this case an animal, belongs in the yes or no column. Finally the teacher asks for the answer. After the answer has been discovered, have the students help you add more animals to each column.

YES

NO
